Adaptor Plug for GN-58/RS-6 Operation

REFERENCE:

25X1

1. The reference points out many problems imposed by the lack of compatibility between equipments caused by the use of a new type plug in the RA-6 Filter Accessory Unit of the RS-6.

2. It is regrettable that changes in personnel, both of the Contractor and of [redacted], have caused a delay in the production of the adaptor units as described in ERD 52-263. In order to avoid further delay to this program, we are discarding our previous plans and intend to proceed as follows:

25X1

- (a) Retain the present GN-58 plug which permits direct operation with the RS-1.
- (b) Procure adaptors to permit operation of the GN-58 with the RS-6.
- (c) Supply a new plug with each RS-6 which will permit GN-58 cables to be modified for direct RS-6 operation where RS-6 is only equipment used.

The action described in (c) was taken during the early stages of production and virtually all RS-6 accessory bags are so equipped.

3. The procurement described in 2(b) is being given high priority. It is suggested that you initiate a requisition for the quantity of adaptors you will require.
